

PLATFORM OVERVIEW

MyDirector-OS is a personal workspace for managing governance records across appointments. It combines portfolio administration, documents, review tools, correspondence, registers and revenue.

DIRECTOR PASSPORT AND PORTFOLIO

Personal credentials, career history, qualifications, languages, KYC records and current / previous appointments. Portfolio attention signals include term ends, re-election, meetings, compliance, invoices and packs without reviews.

BOARD PACKS, VAULT AND PORTAL LINKS

Upload or forward documents, link them to an appointment or meeting, and view / download stored files. Eight quick-access links open Diligent Boards, Nasdaq Boardvantage, Board Intelligence, Azeus Convene, BoardPad, Admincontrol, Aprio and OnBoard. Direct API integrations with major board portal providers are on our roadmap. Signed documents can be saved to the vault or attached to an email draft.

BOARDLENS AI REVIEW

Document review with jurisdiction / entity and seven role lenses, source-grounded regulatory and accounting assertions, summaries, risks, decisions, actions and questions. Long documents use section / combined reading with coverage reporting. Earlier reviews supply comparison and recurring-theme context. Follow-up questions use the saved review and conversation.

ASSISTANT, DISCUSSIONS AND VOICE

Director's Assistant answers and saved discussions use application-selected jurisdiction scope, the library and, when needed, retrieved web sources. Quick, Standard and Full voice briefs can be generated and saved. Dictation supports document annotations.

REGISTERS AND REPORTS

Compliance obligations and recurrence, conflicts / interests and disclosures, duty statements, appointment onboarding briefs, annual director reports, CPD records with exports and director-selected emailing, resolutions, minutes and signatures, with activity logs.

REVENUE, CALENDAR AND INBOX

Fee tracking, invoicing, batch / recurring schedules, receipts, expenses, ageing and opt-in chasing. Eight invoice currencies: GBP, USD, EUR, AUD, CAD, CHF, SGD, AED. Calendar supports forwarded invitations and calendar links. Native email is an optional add-on; Gmail and Outlook can be connected.

REFERENCE COVERAGE

As at 26 October 2026, the live library has 4,091 active records across 19 jurisdiction and US subject scopes: Guernsey; Jersey; Cayman Islands; British Virgin Islands; Isle of Man; Bermuda; Luxembourg; Ireland; United Kingdom; Singapore; DIFC; ADGM; Delaware; California; Maryland; New York; United States Federal; United States SEC; United States Listed Companies.

REGULATORY FEED AND CURRENCY

Library sources are checked on a rolling schedule, mainly overnight in each source's local time. Detected changes are reviewed and accepted by an administrator before they replace stored text. A weekly Friday feed monitors 19 publishers: GFSC, JFSC, CIMA, IOM FSA, CSSF, BVI FSC, BMA, DFSA, FSRA, FCA, MAS, Central Bank of Ireland, Delaware Division of Corporations, SEC, NYSE, Nasdaq, DOJ, FTC and PCAOB. Fixed publications remain citeable.

ACCURACY

The AI cannot fabricate a citation that is not in the verified framework, because there is nothing else to draw from. BoardLens cannot fabricate because it can only draw from what is verified. If the answer is not in the framework, it says so rather than inventing one. Zero fabrications. 100% correct abstentions where the answer is not in the verified framework.

TECHNICAL CONTROLS

Lovable Cloud supplies database, authentication and storage; Cloudflare delivers the app at its global edge. Row-level security on every table. Private storage buckets, with short-lived signed links for files. Data encrypted in transit with TLS 1.3. Automated daily backups with point-in-time recovery managed by Lovable Cloud. Settings offers a ZIP export of your records and files.

AI PROCESSING

AI requests are routed through the AI gateway to Google Gemini. AI processing is stateless and zero-retention: your content is sent to the AI for the review and the AI provider keeps no memory of it. Your content is never used to train AI models. Extracted text, reviews and saved briefs stay in your own account.

SIGNING, RESPONSIBLE AI AND ACCESS

SHA-256 signed-file fingerprints and signing certificates. This constitutes a simple electronic signature with a full audit trail, admissible under the UK Electronic Communications Act 2000 and eIDAS Regulation Article 25. MyDirector-OS was built from the outset with the principles the EU AI Act will require of high-risk AI systems from December 2027. 14-day free trial, no credit card required. Cancel anytime. Membership includes 50 document reviews a month. Browser access is available on desktop, iPhone, iPad and Android.
