

WHY VERIFIED REGULATORY FRAMEWORKS MATTER

MyDirector-OS brings regulatory references into a director's own working record. A named instrument and an inspectable source let a director check an answer against the actual law or rule.

BOARDLENS: THE PACK AND THE APPLICABLE FRAMEWORK

BoardLens reviews the document you provide, appointment information and relevant library rules. It can use earlier reviews to identify changes, carry-forward actions and recurring themes. Regulatory and accounting assertions are checked against retrieved instrument text. Follow-up questions use the saved review and conversation.

DIRECTOR'S ASSISTANT: LIBRARY AND WEB SOURCES

The Assistant and saved discussions retrieve library material and, where routing calls for it, search the web. Web-search queries include your question and its jurisdiction. Source text is retrieved before use, and figures are checked. Questions about MyDirector-OS prices, trials and allowances have a separate product-fact path.

JURISDICTION AND COVERAGE

The question's explicit jurisdiction takes priority, then earlier-question scope, appointment scope and the Director Passport. BoardLens takes the linked appointment's jurisdiction and entity / role context. Guernsey and Cayman references go beyond GFSC or CIMA publications: the library also holds legislation and other relevant public sources. As at 26 October 2026, the live library has 4,091 active records across 19 jurisdiction and US subject scopes.

CURRENCY CHECKS

Library sources are checked on a rolling schedule, mainly overnight in each source's local time. Detected changes are reviewed and accepted by an administrator before they replace stored text. A weekly Friday feed monitors 19 publishers: GFSC, JFSC, CIMA, IOM FSA, CSSF, BVI FSC, BMA, DFSA, FSRA, FCA, MAS, Central Bank of Ireland, Delaware Division of Corporations, SEC, NYSE, Nasdaq, DOJ, FTC and PCAOB. Fixed publications, including court decisions, remain available for citation.

FABRICATION PREVENTION

The AI cannot fabricate a citation that is not in the verified framework, because there is nothing else to draw from. BoardLens cannot fabricate because it can only draw from what is verified. If the answer is not in the framework, it says so rather than inventing one. Zero fabrications. 100% correct abstentions where the answer is not in the verified framework.

CORK & ANOR V SMITH [2026] EWHC 1199 (CH)

In the judgment of 22 May 2026, a firm's letter to the court quoted a non-existent insolvency provision generated with AI assistance. A second letter, written to explain the first, was also misleading to the court. The firm reported itself to the Solicitors Regulation Authority. The lesson is to check the actual legal source. Source: caselaw.nationalarchives.gov.uk/ewhc/ch/2026/1199 (including paragraphs 31 and 33 onward).

ACCOUNTABILITY AND A DIRECTOR'S RECORD

BoardLens saves a review against its source and, when supplied, the appointment and board pack. It records summaries, risks, decisions, actions, questions and reading coverage. Saved discussions preserve the conversation, giving the director a dated record of preparation.

THE DIRECTOR DECIDES

Source links, the applicable instrument and its date are all to hand. MyDirector-OS organises preparation and evidence so the director can challenge figures, ask management for missing material and apply professional judgment.
